

FoundationACCESS Trial Navigator

Matching patients to the right clinical trials

Foundation Medicine offers clinical trial navigation services to help you find and enroll in the right clinical trials for you.

This service provides you with a dedicated clinical trial navigator who will work with you and your health care team to identify the clinical trials that best fit your clinical and genomic profile. The concierge services, provided by EmergingMed, ensure a patient is successfully connected with a matched site through support and follow-up, and removes addressable barriers to enrollment.

The Process:

1. You, your caregiver or health care provider contacts Foundation Medicine's client services (client.services@foundationmedicine.com, 888-988-3639)
2. Foundation Medicine's client services will facilitate the transfer to EmergingMed
3. A Clinical Trial Navigator (CTN) collects relevant clinical information from your health care provider and narrows the search based on your FoundationOne or FoundationOne Heme results
4. Your CTN reviews trial search results with the patient and/or health care provider and provides a summary
5. Your CTN helps you enroll in the clinical trial you and your doctor decide is right for you.

About EmergingMed

EmergingMed® is the leading innovator in clinical trial enrollment optimization, providing solutions for managing the complexities of patient identification, recruitment and retention since 2000. Their core solution is a turn-key, privately branded Clinical Trial Navigation Service (CTNS) featuring concierge support, patient education, and long term follow up; highly curated referral-quality data; multiple digital distribution channels; re-engineered business processes; and comprehensive service metrics and outcomes tracking. EmergingMed's CTNS has managed clinical trial searches for 200,000 cancer patients and 100,000 patients with other serious and life-threatening conditions.
